PROFILE

A motivated and detail-oriented Computer Science graduate with a strong foundation in Artificial Intelligence, natural language processing, generative AI and agentic approach. Experienced in building end-to-end automation with n8n and integrating AI agents into real business workflows. Skilled in Python programming, data analysis, and full stack development using React.js and FastAPI. Possesses excellent communication and teamwork skills, with a strong desire to learn, adapt, and contribute to impactful, real-world projects in a collaborative environment.

Professional Experience

n8n Automation Engineer, IMTA	12/2025 – Present Rawalpindi, Pakistan
Artificial Intelligence Engineer, Workmatecs	08/2025 – Present Islamabad, i-8

SKILLS

Computer Languages

- Python (TensorFlow)
- c++
- javascript
- React.js

Version Control

- Git
- Github

Prompt Engineering

- Prompting
- Tuning
- Orchestration

Agentic AI

- Autonomous Agents
- Tool Integration
- Task Orchestration
- Memory Management
- Reasoning Loops

Full Stack Development

- React.js (Frontend)
- FastAPI (Backend / REST APIs)
- API Design & Integration
- Web Scraping & Data Pipelines

Workflow Automation

- n8n (Orchestration, Webhooks, API Integration, Conditional Logic, Error Handling, Scheduled Triggers)
- GHL (Go High Level)
- Zapier
- Make.com

Retrieval-Augmented Generation (RAG) Architect

Engineered and deployed a RAG pipeline using LangChain, Pinecone, and proprietary documentation to create an internal support chatbot.

Generative AI (Hugging Face)

- Model Fine-Tuning
- Transformer Architecture
- Pipeline Deployment
- Tokenization Optimization
- Inference Acceleration

LANGUAGES

- English
- Urdu
- Pashtu

COURSES

Machine Learning Specialization, *Coursera (by Andrew Ng)*

Generative AI Course, *Krish Naik (udemy)*

Python Programming Certification, *Pearson VUE*

Advanced Python Programming Course and Certificate, *NAV TTC*

PROJECTS

SAM_AI – Lead Generation & Marketing Automation Platform, *n8n, Web Scraping, FastAPI, React.js, OpenAI*

- Built web scraping pipelines to extract and enrich prospect data from multiple online sources into a structured lead database.
- Developed the lead management side of the platform: filtering, segmentation, status tracking and campaign assignment for outreach teams.
- Designed n8n workflows to automate the full marketing cycle — lead capture, data enrichment, personalized email/WhatsApp outreach, and conditional follow-up triggers.
- Integrated AI agents to personalize outreach copy and qualify leads automatically, cutting manual prospecting and follow-up work significantly.

FreightProcure AI, *n8n, OpenAI, WhatsApp API*

- Architected an automated freight procurement workflow using n8n to integrate WhatsApp user inputs with backend AI processing and email delivery systems.
- Deployed OpenAI Agents to autonomously parse unstructured quotation data and generate comparative analysis for decision-making.
- Automated critical logic including unique ID generation, vendor email dispatch, and conditional follow-up triggers for non-responsive carriers.
- Achieved a 90% reduction in manual processing time and increased operational efficiency by 35%.

AI Chatbot using Retrieval-Augmented Generation (RAG), *final year project*

- Built a document-based chatbot using RAG with LangChain, Chromadb.
- Processed PDFs using PyPDFLoader and split content with RecursiveCharacter TextSplitter.
- Applied concepts of RAG architecture, vector search, and LLM integration for intelligent responses.

Data Analyst using Agentic AI Approach

- Developed an Agentic AI system that analyzes user-provided data and generates intelligent analytical responses.
- Implemented LLM-driven code generation to dynamically process datasets and execute analytical operations.
- Integrated autonomous agent workflows to interpret, compute, and visualize results with minimal human input.
